

Clytie:

These criticisms were brought to House Council meeting today.  
Hope they're helpful!

(1) a consulting room where student and Dr. can converse alone.

(2) a Health Service Committee elected by the community rather than appointed. The idea here is that a small minority knows the personnel and function of the Committee in its present status and that an elected Committee would not only enlighten the students as to the functions of the Health Service but cause them to make more use of it as a "sounding board" for complaints, etc.

(3) that a student be engaged to take care of the kitchen needs of the infirmary, alleviating the extra work in the kitchen at the present time and bringing closer collaboration between kitchen and infirmary.

(4) a new infirmary, complete in itself - probable but impossible at the present time.
