

It has been called to our attention, from many sources, that the glassware is unsafe. Every few days some glass or soup bowl explodes - so far no major accidents have occurred - However, if one person should get a piece of glass in their eye the expense and damage incurred would probably be far greater than the amount of money which would be lost in replacing the glassware. If anyone should happen to eat any food with bits of glass in it, again ~~the~~ the damage would be great. We feel that, from a Health standpoint and from the ^{standpoint} ~~feeling~~ of the students something must be done about this right away. May we suggest that you take this up right away, and let us know the outcome.
