Notes on Meeting Flans for Next Term

- I Human Reproduction series
 - to cover
 - 1. Anatomy
 - 2. Glandular Construction
 - 3. Menstrual Cycle
 - 4. Pregnancy and Labor

(Birth Control)

Suggested reading should be posted before the four lectures.

II First Aid

Meeting about best things to do in any accidents. (Ask in house meetings what kind of questions students would like answered--this meeting will probably be primarily for skilers.) Perhaps pamphlets on first aid could be distributed at the meeting.

Suggestions to the Infirmary

I Veight Checks

Several complaints have been heard about the conthly weight check. It was suggested that the infirmary send notes to students explaining the necessity of same.

II Physical Examinations

There has been some comment on questionnairres that there should be more than two physicals during four years. Notes to students or an announcement at house meetings should make it plain that students may have a complete check-up at anytime. If necessary, a regular y arly check-up could be instituted. However, it would be necessary to see Miss Jones in regard to the expense of having Dr. McCullough at the college for the longer time this would require.
